Frav. 24, 8 sto. 19

A) 
$$E(\omega) = 3 - \frac{\omega^2}{\omega^2}$$
,  $M(\omega) = \frac{\omega_1^2}{\omega_2^2 \omega^2}$ 

Be there  $E(\omega) \mu(\omega) = 300$ 

$$= \frac{1}{3} - \frac{\omega^2}{\omega_1^2} \right) \frac{\omega_1^2}{\omega_2^2 - \omega^2} = \frac{3\omega_1^2 - \omega^2}{\omega_2^2} = \frac{\omega_2^2}{\omega_1^2 - \omega^2}$$

$$= \frac{\omega_2^2}{\omega_1^2} \cdot \frac{3\omega_1^2 - \omega^2}{\omega_2^2 - \omega^2} = 500$$

$$= \frac{3\omega_1^2 = \omega_3^2}{\omega_1^2} \Rightarrow \sqrt{E\mu} = \omega_2$$

$$= \frac{1}{3} - \frac{\omega_2^2}{\omega_1^2} = \frac{1}{3} - \frac{\omega_2^2}{\omega_1^2} = \frac{1}{3} - \frac{\omega_2^2}{\omega_2^2} = \frac{1}{3} - \frac{1}{3} - \frac{\omega_2^2}{\omega_2^2} = \frac{1}{3} - \frac$$

Γ) Για ω/ω= X:  $E(x) = 3 - x^2$  kas  $M(x) = \frac{1}{1 - x^2}$ V3 4 4 E(x) + Για να μω εχαμε εξασθένηση) θα πρέλα (ε>O και μ>o)€ h (ε<0 και μ<0)-Apa or Juzoumes ouxvoignes when  $\frac{\omega}{\omega_c} < 1 = x0 < \omega < \omega_c$ Kay 0 > \(\sigma = \) (\(\omega > \omega \sigma^3\) ( Era aupa ways vrapper rodos as  $\mu = ixi ora orazory$ ray no w= w, \$3 exame ENZ) 0
